

Rapid Risk Profile

For SOC 2

What is it?

- A short, self-guided assessment of organizational SOC 2 readiness
- Online, automated, and cost-free

What We Provide:

- The output includes a letter grade-readiness report against the SOC 2 Trust Services Criteria (TSC)
- A consultative discussion around common questions and guidance on next steps

Why Choose Us?

- A low-impact assessment for SOC 2 audit readiness
- A packaged, end-to-end partnership approach to assessment, advisement, and delivery of SOC 2 trust certification

Solution Partners:

Your Customers Demand It. Are You Ready?

As SaaS (Software as a Service) and service-provider companies of all market verticals and sizes are finding out, having a SOC 2 certificate is critical to business. Customers want proof that your organization's controls appropriately protect their sensitive data.

SOC 2 is not a compliance standard. It is a certification of trust that requires your organization to demonstrate adequate controls are in place and functioning at appropriate levels. Whereas most compliance standards are point-in-time, SOC 2 is unique in its focus on process and a demonstration of effectiveness over time.

How ready is your organization and security program to achieve SOC 2 certification? Maybe it's time you found out.

A Starting Point for SOC 2
